

# Update on Offline Pixel Calibration

Wei-Ming Yao (LBNL)

LBNL ID Software Meeting, 11/21/2006

## Progresses since last meeting:

- PixelCalibration package in InnerDetector/InDetConditions:
  - PixelCalibSvc – Providing service to access the calibration constants
    - \* [PixelCalibSvc](#)
    - \* [PixelCalibDbSvc](#)
  - PixelCalibTool – Providing tool to create PixelCalib TDS via call back
    - \* [PixelCalibDbTool](#)
    - \* [PixelCalibDbTestWriteRead](#)
  - PixelCalibData – Pixel Calibration Data Model
- Code can be found at [/afs/cern.ch/user/w/weiming/public/InDetConditions/PixelCalibration](http://afs/cern.ch/user/w/weiming/public/InDetConditions/PixelCalibration), and will be committed to CVS shortly.

# Project Overview

- Calibration infrastructure
  - Calibration Data (Threshold, ToT) – Weiming Yao (LBNL)
  - Dead Channel Map – Christoph Ruwiedel (Bonn)
- Calibration Content – Georges Aad, Remy Zaidan (Marseille)
  - Online Calibration at SR1
  - Production Database
- Better parametrization of ToT calibration – Serena Psoroulas, Attilio (Milano)
- Implementation in Digitization – Fredrik Tegenfeldt (Iowa)
- Implementation in Clusterization – Tommaso Lari (Fisica)

# Technology

- Using LCG COOL conditions database software
  - For calibration data, store data both directly in COOL as CLOB's, and in C++ objects stored in POOL files, referenced from COOL.
  - COOL tags can be used to identify multiple versions of a calibration
- Calibrations can be written from Athena jobs, read back, and verified.
- Automatic loading of valid conditions data on read-back, matching interval of validity to current event being analysed, loading new versions when required.
- Client code can register call-backs to be notified when conditions change.

# Pixel Calibration Data Model

Storage	Definition	Units	Typical range
1B	threshold	30e	2000-5000 e
1B	dispersion	3e	80 - 600 e
1B	noise	3e	0 - 600 e
1B	timewalk	30e	2000-8000 e
float	A for ToT		0-300
float	B for ToT		
float	C for ToT		
1B	P1 dispersion of ToT	1/100	+/-100
1B	P2 dispersion of ToT	1/1000	+/-100

- 38B/per chip, corresponding to 1 MB/Detector
- It took about few sec to read and unpack whole pixel detector into a text file

- There are 1744 Modules for whole Pixel detector
- Stored in folder /TESTCOOL/PixCalib

# Object Class in TDS

- PixelChipSummaryData to hold all the data for a chip
  - chipID m\_ident; // std::map<Wafer\_id, n(0-15) >
  - char m\_threshold[4]; // (thres, sigma, Noise, TW):
  - char m\_thresholdlong[4]; // (thres, sigma, Noise, TW) for long pixel
  - char m\_thresholdganged[4]; // (thres, sigma, Noise, TW) for ganged pixel
  - float m\_q2tot[3]; // a,b,c for standard pixel and long
  - float m\_q2totganged[3]; // a,b,c for ganged
  - char m\_totres[2]; // for (p1, p2) each chip
- PixelCalibData contains 16 chips per module
- Accessories:
  - const chipID& getChipID() const;
  - int getThreshold(int type); //type=0/1/2 for standard,long and ganged pixels
  - int getThresholdSigma(int type), getNoise(int type), getTimeWalk(int type)
  - float getQ2TotA(int type), getQ2TotB(int type), getQ2TotC(int type);
  - float getTot(float Q), getTotP1(), getTotP2(), getTotRes(float Q);
  - void setChipID(const chipID& ident);
  - void setThreshold(int type, int thres, int sigma, int noise, int timewalk);
  - void setQ2Tot(int type, float A, float B, float C);
  - void setTotRes(int p1, int p2);

# PixelCalibSvc

- Load and Configure PixelCalibSvc

```
theApp.Dlls += [ "PixelCalibSvc" ]
```

```
theApp.ExtSvc =+ [ "PixelCalibSvc" ]
```

```
PixelCalibSvc = Service( "PixelCalibSvc" )
```

- Accessories:

- int GetThreshold(const Identifier& wafer\_id, int irow, int icol, int circ);
- int GetThresholdSigma(const Identifier& wafer\_id, int irow, int icol,int circ);
- int GetNoise(const Identifier& wafer\_id, int irow, int icol, int circ);
- int GetTimeWalkThreshold(const Identifier& wafer\_id, int irow, int icol, int circ);
- float GetQ2TotA(const Identifier& wafer\_id, int irow, int icol, int circ);
- float GetQ2TotB(const Identifier& wafer\_id, int irow, int icol, int circ);
- float GetQ2TotC(const Identifier& wafer\_id, int irow, int icol, int circ);
- float GetTotP1(const Identifier& wafer\_id, int circ);
- float GetTotP2(const Identifier& wafer\_id, int circ);
- float GetTotRes(const Identifier& wafer\_id, int circ, float Q);

- int GetThreshold(const Identifier& pix\_id);
- int GetThresholdSigma(const Identifier& pix\_id);
- int GetNoise(const Identifier& pix\_id);
- int GetTimeWalk(const Identifier& pix\_id);
- float GetQ2TotA(const Identifier& pix\_id);
- float GetQ2TotB(const Identifier& pix\_id);
- float GetQ2TotC(const Identifier& pix\_id);
- float GetTotP1(const Identifier& pix\_id);
- float GetTotP2(const Identifier& pix\_id);
- float GetTotRes(const Identifier& pix\_id, float Q);
- int PixelType(int row, int col, int circ);
- Private:  
PixelType(int row, int col, int circ);

# PixelCalibDbSvc

- Configure PixelCalibDbSvc

```
theApp.ExtSvc += [ "PixelCalibDbSvc" ]  
PixelCalibDbSvc = Service( "PixelCalibDbSvc" )  
PixelCalibDbSvc.DBToolType = "PixelCalib::PixelCalibDbTool"  
PixelCalibDbSvc.DBToolName = "PixelCalib_PixelCalibDbTool"  
PixelCalibDbSvc.CalibFolder = "/TESTCOOL/PixCalib"  
PixelCalibDbSvc.CalibLocation = "PixCalibKey"
```

- Accessories:

- virtual StatusCode IOVCallBack(IOVSVC\_CALLBACK\_ARGS);
- const PixelCalib::PixelCalibData\* getCalibration(const Identifier & id) const;

# PixelCalibDbTool

- Load and Configure PixelCalibDbTool

```
theApp.DLLs += [ "PixelCalibTool" ]
PixelCalib_PixelCalibDbTool = Service( "ToolSvc.PixelCalib_PixelCalibDbTool" )
PixelCalib_PixelCalibDbTool.CalibFolder = "/TESTCOOL/PixCalib"
PixelCalib_PixelCalibDbTool.CalibLocation = "PixCalibKey"
PixelCalib_PixelCalibDbTool.WriteDB = False
```

- Accessories:

- virtual StatusCode IOVCallBack(IOVSVC\_CALLBACK\_ARGS);
- StatusCode createPixelCalibObjects() const;
- StatusCode writePixelCalibTextFiletoDB(std::string file) const;
- StatusCode readPixelDBtoTextFile(std::string file) const;
- void printPixelCalibObjects() const;
- PixelCalib::PixelCalibData\* getCalibPtr(const Identifier& idet) const;
- const PixelCalib::PixelCalibData\* cgetCalibPtr(const Identifier& idet ) const;

# PixelCalibDb Test Write Read – an Example

- DataBase Connection

```
IOVDbSvc.dbConnection = "impl=cool;techno=oracle;devdb10:TESTCOOL:  
WEIMING:dbconnection00"  
IOVDbSvc.Folders += ["/TESTCOOL/PixCalib"]  
IOVDbSvc.GlobalTag = "TESTCOOL_dbtest"
```

- WritePixelCalibDB.py

Write pixelcalibdb\_dummy.txt into /TESTCOOL/PixCalib

- ReadPixelCalibDB.py

Read CondAttrListCollection from /TESTCOOL/PixCalib and convert to  
PixelCalibDataColl (TDS)
